AutoCAD Crack 2022 [New]

History AutoCAD was originally created to handle designs for industrial equipment, like the CNC (computerized numerically controlled) machines in automobile manufacturing. The first version, AutoCAD LT, was for use on minicomputers. It was released for Windows in May 1984, with hardware manufactured by Unisys. Later versions were also available for Apple Macintosh. In 1990, it was released for the Amiga platform. AutoCAD Architecture, a new version for architecture drafting, was released in 1987. With the introduction of AutoCAD 1992 and AutoCAD LT 1992, the lines between the professional version and the consumer version were blurred. AutoCAD Architecture was split from AutoCAD and incorporated into AutoCAD LT. Its successor, AutoCAD LT Architecture, was released in 1991. In 1994, AutoCAD for Windows 95 was introduced. AutoCAD LT Architecture for Windows 95 was released in 1995, with identical features as the professional version. AutoCAD 360 was released for Windows on October 12, 1998, with features similar to the Professional version. It was the first CAD application to be released as both a client and a server. This means that when a client connects to a server, the server can control the client. When a client is connected to a server, its screens are displayed in a browser window. When the client disconnects, the browser window is closed. In 2002, AutoCAD LT Architecture was replaced with AutoCAD LT 2002. In 2005, AutoCAD LT 2002 became AutoCAD LT 2006. In 2008, AutoCAD LT 2006 became AutoCAD LT 2012. AutoCAD MECAD was released for Windows in 2001. It was designed to display drawings on mobile devices like smartphones, PDA, and tablets. In 2005, AutoCAD Architecture was renamed to AutoCAD Architecture 3D. In 2006, it was renamed to AutoCAD Architecture 2011. In 2012, AutoCAD LT 2012 became AutoCAD LT 2013. It continued to incorporate many of the features of the 2012 professional version. In 2018, AutoCAD LT 2019 became AutoCAD LT 2020. It was the first AutoCAD LT release to use the name AutoCAD since AutoCAD 2006. It was also the first release since

Interrater reliability of the clinical applicability of the International Classification of Diseases, Ninth Revision, Clinical Modification, in cancer patients. To determine the interrater reliability of coding the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM), to determine whether there was an increase in the number of codes used to diagnose cancer patients, and to assess the appropriateness of the codes in diagnosing cancer. We reviewed 20 of the first 25 consecutive inpatient cancer patients admitted to the University of Michigan hospital from December 1991 to December 1995. Two physician coders independently coded these patients. They were asked to determine the proper ICD-9-CM codes for each patient. In addition, the coded data were checked against the medical records. Agreement between the physicians was assessed with the use of kappa statistic. The cancer patients were divided into four groups: hematopoietic system cancers, female reproductive system cancers, gastrointestinal cancers, and urinary tract cancers. The patients with hematopoietic system cancers were treated at the Veterans Administration Medical Center and the Department of Oncology, University of Michigan. The cancer patients with gastrointestinal tract and urinary tract cancers were treated in the Division of Hematology-Oncology, Department of Medicine. The female reproductive cancer patients were treated in the Department of Obstetrics and Gynecology. Kappa values for the four groups were 0.67, 0.84, 0.74,

and 0.98, respectively. Kappa values were higher for the cancer sites with more than 20 patients. More than 90% of the codes were
