
GeoCalcul.Pro Crack Serial Key Free [Win/Mac]

GeoCalcul.Pro Crack + Activation Code

GeoCalcul.Pro is a high-performance, user-friendly 2D and 3D calculator that can be used as a mathematical calculator, a volume and area calculator, a unit convertor and an equation solver. It supports more than 50 shapes including solids, cylinders and prisms and a wide range of measurement units. It can be used to solve mathematical equations, calculate the volume and area of geometrical shapes, convert units, make the right unit and display graphics. GeoCalcul.Pro provides a

quick and user-friendly manner of solving algebraic equations and calculating the volumes of solids. You can use the program to perform a range of operations, such as plotting graphs of the dimensions of various geometrical shapes, calculating the diameter of a circle, lines, areas and volumes of solids, plotting round curves and surfaces, plotting graphic representations of solids, calculating the perimeter and the height of a polygon, and drawing line diagrams. It also offers a host of functions, such as sin and cosine, tangent, absolute value, exponential, natural logarithm, and logarithm, and the conversion of various measurement units. GeoCalcul.Pro helps you calculate and calculate the volume and area of various shapes (such as the cube, square, octagon, cylinder, sphere, prism, pyramid, polygon and prisms) from which

you can plot geometric representations of the shapes. It also provides functions such as the circumference of a circle, the diameter of a circle, the area, volume, surface area, volume and the perimeter of geometric shapes such as the circle, the sphere, the cone, the cylinder, the cylinder, the prism, the prism, the cylinder of revolution and the cylinder of revolution. The shape of a solid is obtained by rotating, rotating the axis, and/or flipping the axis. You can use GeoCalcul.Pro to display the volume and area of a polygon, the area of a sector of a cone, and the area of a cylinder. GeoCalcul.Pro also allows you to calculate the area of a circle, the surface area of a cylinder, the surface area of a cone, the volume and area of a sphere, and the volume and area of a cone of revolution, as well as the dimensions of geometric shapes, the three-

dimensional volume and area of a prism, and the height of a prism. The program allows you to do calculations involving linear equations, radial equations, two

GeoCalcul.Pro Crack + License Keygen

GeoCalcul.Pro is a lightweight educational tool designed specifically for working as a volume and area calculator, unit convertor and equation solver. It comes with an impressive number of geometric shapes (more than 50) and unit of measurements. The program's functions can be applied to 2D and 3D shapes such pyramids and prisms. User-friendly looks The tool gives you the possibility to switch between different calculation modules, namely geometric calculation, unit conversion, equation and calculator. Each of the aforementioned

functions comes with its own set of parameters where you can manually input data in order to carry out the calculations. A help manual is not included in the package but the layout is intuitive so you won't invest too much time and effort into decoding the program's features. Geometric calculations GeoCalcul.Pro allows you to choose between two main categories, namely flat surfaces, and surface and volume of solids. The flat surfaces mode provides the right tools for performing calculations related to circular shapes (circle, sector of a circle, segment of a circle), ellipse, triangle, ring, quadrilaterals (e.g. square, rectangle, trapeze), and regular polygons (e.g. pentagon, hexagon, octagon). The surface and volume of solids category helps you access various parameters, such as Plato (e.g. cube, octahedron, dodecahedron),

Archimedes (e.g. snub cube, truncated cube), truncated pyramid, as well as round forms (cylinder, cone, sphere, torus, ellipsoid, truncated cone, and barrel). If you want to calculate the area of a triangle, you need to input the a and b sides. The parameters differ for each geometrical shape. However, there are some fixed options embedded in the geometric calculation panel that never change. They help you pick the material from a drop-down list and type. Unit convertor GeoCalcul.Pro supports a wide range of measurement units. They are structured into different categories, so you may easily find them, such as distance (e.g. Ancient Greek, Old French, Japanese, Nautical, Geographical), area (e.g. Metric, Japanese, Thai, Ancient Roman), volume (e.g. Metric, US liquid Measure, Cooking), mass (e.g.

Metric, Japanese, 09e8f5149f

Math & geometry graphics and functions on-screen calculator. Calculate without writing any math equation. Easily convert measurement units (from inches to feet) and a variety of geometric shapes (triangles, circles, squares, polygons) dimensions, surface and volume. Choose between 2-D and 3-D input possibilities. A wide range of measurement units (distance, volume, area, mass, time and temperature). A unit converter. Graphical Equation solver, area solver, volume solver, quadratic solver, cubic solver, linear solver, modular solver. Math expressions, constant expressions and math constants, real valued and integer valued, on-screen calculator. A scientific calculator. A handy application for various educational

purposes. Features: -- Calculate for 2D and 3D shapes on-screen. -- Includes more than 50 graphic shapes, such as circle, triangle, square, ellipse, triangle, ring, rectangle, trapeze, hexagon, octagon, pentagon, hexagonal prism, octagonal prism, rhombus, pyramid, and many more... -- Calculate any area, volume and surface with precision. A precise calculation of polygons at any corners. A precise calculation of 2D rectangular polygon with rounded corners. Defined as exact precision of arithmetic calculations. -- Calculate for real and integer values. Both modes are applicable for all types of unit of measurement (Ancients Greek, Old French, Japanese, Thai, Sicilian, Ancient Roman, Metric, Nautical, US liquid measure, Currency, Quantity, Volume). -- Graphical equation solver. -- Area Solver. --

Volume Solver. -- Quadratic solver. -- Cubic solver. -- Linear solver. -- Modular solver. -- Math expressions, constant expressions and math constants, real valued and integer valued, on-screen calculator. -- A scientific calculator. -- A handy application for various educational purposes Supports the Windows operating system. Calculator in HTML5 is a very useful application designed for calculating special areas and volumes of irregular shapes. The program is very useful for students and professionals.

Functionalities: Geometric calculations: calculate the areas and volumes of polygons on your screen, see shapes in 3D. Irregular shapes and calculations: calculate shapes in 3D with a bounding box, calculate the volume of irregular shapes. Cal

What's New In GeoCalcul.Pro?

System Requirements For GeoCalcul.Pro:

- Windows 10, Windows 8, Windows 8.1, Windows 7, Windows Vista or any other operating system - A minimum of 2 GB RAM and a 2 GHz processor - A 3 GB free space in the hard disk of your computer - DirectX 11.0 compatible video card - Internet Explorer 11 or Google Chrome or Mozilla Firefox

Diving at the 2010 Summer Youth Olympics – Boys' synchronized 3 metre springboard The boys' synchronized 3 metre springboard diving competition at the 2010 Summer Youth Olympics was held on August 18 at the Sun Art Gym
