1. Connecting to a Photoshop File (Optional) Having a Photoshop file open is called _connecting._ After you have finished editing the document and are ready to save it, you want to save it back to the same Photoshop file it came from. Connecting is a quick and easy way to save an edited image to the same file as the original. For this tutorial, I will be using the Lyra Studio.psd file, saved in this book's folder on your hard drive, for this example. 2. Create a New File The first step is to create a new document, which means that you will be starting a new Photoshop file. Create a new document by using the File > New command. Name your new file TestFile.psd. 3. Import an Image into the New Photoshop Document Your new document is empty. You can add any image that you want to use in your new document. Here I am using the Lyra Studio.psd file in my sample folder. Now, I will go ahead and import it to the new document. Start by using the File > Import command. Select the file location on your computer and open the Lyra Studio.psd file. After you have imported the image into the document, you can zoom in and out of the picture by using the Zoom tool. This tool allows you to zoom in or out on a picture by double-clicking or selecting the Zoom tool from the toolbox and pressing the D key on your keyboard. Figure 5-2. The Lyra Studio.psd file is imported into a new Photoshop document, which is now ready to be edited. ## Starting with a Sketch In this book, I will be going over many of the different basic shapes. I recommend that you create a sketch first as a guide. Using the Pen tool and the Simple tool combined with the Eraser tool, you can use these shapes as a reference as you work.
