You're reading this right now, in a world with... at last count... 9,700,000,000,000,000,000,000 operating systems. Granted, those billion is mostly a wild guess. The real number is almost certainly much larger than that, and there's only one developer of any consequence working on an operating system these days. (Well, Microsoft, but let's keep it simple.) So just how confusing is the OS landscape? Here's my attempt at the periodic table of operating systems, based on the primary concerns (or the last time I heard someone say it was a primary concern) that the operating system folks talk about. There's no up and down here, only a vast sea of computers (well, and a few exotic ones like the Google 1cb139a0ed
