### What's New in the?

**Image Cache:** Now you can configure AutoCAD to cache your drawings, which speeds up edits. The saved images can be used for any model geometry or drawing feature that includes an image. Also, with inline 2D graphics, you can edit and preview a drawing that includes a 2D image within it. (video: 5:15 min.)

**Rasterization of 2D Images:** After you add 2D images to your model, you can easily set their rasterization settings. Rasterization lets you create and manage raster images, such as logos and images, while leaving the original design text as vector. (video: 1:20 min.)

**Drawing Templates** Assign and reuse a template as a starting point for multiple designs. Templates allow you to save and reuse blocks, views, and 3D models so you can quickly start drawing and get back to work. (video: 4:45 min.)

**Enhanced Tracking and Dynamic Tracking:** Using AutoCAD's new dynamic tracking system, you can navigate to a drawing from a model, and then set the tracking angle and viewing direction. You can even set a tracking target. Tracking improves navigation, because AutoCAD remembers the last tracking position and rotates you back to it. (video: 1:20 min.)

**Markup Enhancements:** Use the familiar code editor to edit text, annotations, and comments directly in your drawings. Quickly insert and edit strings of text, and quickly and easily access the latest feature or term. (video: 2:15 min.)

To learn more, read the **Updates to the 2014 Line Style Options:** Inline line styles have been updated in AutoCAD to offer more advanced options. You can now edit all of the line style options and change settings directly in your drawing. The new options also make it easier to style every single line in a drawing. (video: 1:15 min.)

**Options Enhancements:** AutoCAD has a range of new options to help you configure your drawings:

- Organize Selection:** The Organize Selection command helps you organize the selected features. For example, you can add an option to Group commands (all members of the group are selected), a new Visibility selection, and a new Visibility selection.
