If you have not used either AutoCAD or Navisworks, you may find the discussion below helpful as a comparison of the features and user interface. AutoCAD and Navisworks differ in several ways. AutoCAD is a commercial, desktop CAD application that works with AutoCAD 360. AutoCAD 360 is available for both Mac and Windows. AutoCAD is available for licensing at Autodesk.com for \$2,500 per user per year. Autodesk Navisworks is a cloud-based application that requires no installation. Navisworks is a subscription-based application. Navisworks pricing is dependent on the amount of people and data involved, and begins at \$7 per user, per month. AutoCAD and Navisworks are both regarded as "true" CAD applications. Although AutoCAD and Navisworks appear to be similar, there are key differences between the applications that will make you think twice before deciding on which one to buy. AutoCAD is a commercial application that includes an extensive library of objects and can be used for any type of design, including architecture. AutoCAD is regarded as a "true" CAD application, and includes a robust set of features to create 3D models. AutoCAD is a good choice for complex design projects that include 3D models. Autodesk Navisworks is a cloud-based application that is a subscription-based product that

File formats The file format used by AutoCAD is the DXF file format. It is a text-based vector drawing format, similar to an ASCII text file. DXF is a very portable file format, similar to the ASCII file format, but also supports binary file compatibility

with several existing CAD file formats, notably DWG, DWF, CAD file formats and PLT. The binary files are compatible with most widely used CAD file formats, so the files can be edited on other applications. Binary (binary) files are ASCII files containing binary data, not text. Accessibility and keyboard shortcuts AutoCAD is designed with accessibility in mind. The default key bindings and keyboard shortcuts are designed to maximize screen space for the user's drawing and drawing space.

Window AutoCAD has many windows to work with, not only the standard drawing window (View) but also other auxiliary windows. These include: Properties Window (Property View) – displays all the properties of a selected object Properties View – displays all the properties of all the objects on a sheet Parameter Information – displays information for the current selected parameter, tool or property Class Manager – displays all the classes for all the objects on a sheet, as well as a limited set of tools and parameters for each class Data Window – displays the data of the current selected object and several operators to manipulate it Inventor – display the data of all the Inventor-based objects Sheet Properties – display various properties of a selected sheet Sheet View – a view of the drawing that can be changed to display any selected layer. DesignCenter – a tool for managing drawings in multiple files and design space. Paper Space – a view of the paper space of a drawing (for horizontal or vertical layouts) Tool Manager – displays information about the current tool and its parameters Keyboard shortcuts allow for quick and easy movement of objects and many objects can be selected simultaneously. For example, if the user clicks on a part of the drawing, it is selected and the arrow keys are used to move it to a desired location. If the user clicks on a parametric handle of a hole, it is selected and the arrow keys are used to resize the hole. If the user clicks on a text symbol, it is selected and the user can type a new label or modify the existing label. Keyboard shortcuts allow for input of additional dimension and annotation data. AutoCAD has many options to customize the appearance 5b5f913d15
