Error 2- try this. the Bankruptcy Court and REVERSED and REMANDED. NOTES [1] The Honorable Arthur B. Federman, United States Bankruptcy Judge for the Southern District of New York. [2] This Court's familiarity with the Debtor's complex bankruptcy case is based upon the thorough and extensive findings of fact and conclusions of law made by the Bankruptcy Court. See In re Gunnells, Inc., 2008 WL 521785 (Bankr.D.Minn.2008). [3] At trial, Mr. Rolfson testified that by January 2006 he had, in fact, stepped down as President of Millennium, but he was terminated a few days later. [4] The three post-closing promissory notes that were issued were a personal loan to Mr. Rolfson, the Revolver, and the REA. Mr. Rolfson testified that he intended these three post-closing promissory notes to be fully paid, but that for purposes of the Bankruptcy proceeding, he claimed that the REA was "joint" with Millennium because it was co-borrowed. [5] This agreement of consideration was not, however, memorialized in writing, and Mr. Rolfson admitted that he was not aware of the written documents memorializing the oral agreement of consideration. [6] Mr. Rolfson stated that when he and Mr. Rolfson formed Millennium, Mr. Rolfson was unaware of the purpose of the Revolver because Mr. Rolfson was using proceeds from the Revolver to fund Millennium. [7] The $800,000 worth of shares originally issued to Mr

   The influence of anaesthesia and disease on pituitary-gonadal function. The influence of anaesthesia and disease on pituitary-gonadal function is reviewed, with special attention to the two general patterns of disturbance: gonadal suppression and stimulation. In animals, suppression is most commonly manifested by an inhibition of gonadal function in the adult and development of reproductive failure in the fetus and infant. The most common cause of neonatal suppression is iatrogenic or intrauterine exposure to any substance (including stress, drugs and chemicals) that affects gonadal function in the mother. In animals, fetal exposure to maternal adrenal hormones, especially glucocorticoids, may predispose the offspring to be more sexually mature. In humans, menstrual dysfunction and infertility are most often due to the direct effect of disease on the hypothalamic-pituitary-gonadal axis. An effect of intrauterine exposure to glucocorticoids on the offspring has been reported; while other studies have failed to demonstrate a role for exposure to maternal adrenal hormones. The effect of anaesthesia on pituitary-gonadal function is limited to the short term. There is no evidence of permanent damage to the hypothalamus-pituitary-gonadal axis following exposure to anaesthetic agents.// Copyright 2014 The Go Authors.
