Do not redistribute or sell! Thanks for looking, Harry. Q: Why was my answer on the suicide question edited? I was answering the question: How did Woody Allen's parents handle the suicide of his sister? My answer was Everyone died, including Bob Dylan Well, it was edited, and the edit only deleted the paragraph and replaced the word "everyone" with "none", thus making my answer look like this: None died, including Bob Dylan Now, I think this means that, after an edit, the original author should be notified, or at least give an option to undo the edit. Why does this answer get edited? A: My answer was Everyone died, including Bob Dylan Well, it was edited, and the edit only deleted the paragraph and replaced the word "everyone" with "none", thus making my answer look like this: None died, including Bob Dylan Now, I think this means that, after an edit, the original author should be notified, or at least give an option to undo the edit. The details of the edit were: "2) You forgot to mention: the whole family died." This has been rectified, and your answer was undeleted. This invention relates to a bumper structure which absorbs an impact energy during the running of a motor vehicle. A bumper structure as disclosed in, for example, U.S. Pat. No. 5,037,131 is generally known as this kind of impact-absorbing type bumper structure. This patent shows a bumper structure which is composed of a reinforcing upper member or upper shell portion formed by pressing and bending an elongate and flat sheet material and a reinforcing lower member or lower shell portion formed by pressing and bending a flat sheet material to

A simple solution of PEO (red) and PDMS (orange) was injected from the microtube tip into the centrifugal spinning system to separate two liquids of different viscosity. The two liquids passed through the microfluidic device and were cast onto a hydrophobic substrate to generate a film of microscale beads (yellow). The initial planar boundaries of the two liquids are then transformed to the curved surfaces of the microtube (blue and black) after a brief relaxation process. The two liquids move along the microtube and remain separated by the PEO, which is hydrophobic.
