Feeding of pigs provided with a ration composition for lactating sows. A feeding trial was conducted to determine the responses of lactating sows to feeding a ration in which the amount of starch, fat and sodium was reduced. Crossbred (crossbred x Yorkshire) sows were maintained in groups of four animals and given a total of 8 kg daily of a cereal-based diet. The composition of the diet, based on the protein-to-energy ratio (28:100), was determined to achieve a desired energy balance. Fat and sodium were reduced by replacing MD with three levels of CS, which contained 5, 7.5 or 10% cellulose. The experiment was carried out with three sows/treatment and the data were analysed by analysis of variance. However, the lactating sows responded to feeding the diet with 10% CS as indicated by a significant (P How a legend is made March 21, 2013 We have a phone number that I call most, if not all, mornings.
