Drawing settings now support both external and internal encodings when placing text. Encoding is used when the user types to determine the character's graphic representation. In the various Text Styles dialog boxes, the new Format As tab allows

you to change the font, size, and weight of text created using an existing Text Style. If you have multiple text styles on a sheet, they are now grouped in a dialog box. If you are typing on a sheet with multiple text styles, the new autoTextMarkFormatSize option now applies the format of the selected text style to the new text. The

new data field autoText and dataAnchorControl buttons are available in the context menu of a drawing. When you use the drag-and-drop tool and select a block-based drawing element, a drop target appears on the drawing canvas, and you can quickly transfer an image or a text style. The Angle Alignment dialog box has been

replaced by the Tool Alignment dialog box. When you drag to a control on a sheet, the sheet name appears in the Properties palette to help you select the sheet on which you want to use the control. When you insert a drawing directly into a drawing, the drawing appears in a new sheet, and the new drawing is now

automatically placed in the center of the sheet. If the drawing already exists in a sheet, AutoCAD 2023 automatically inserts the drawing into the sheet. If you want the drawing to be placed on the sheet's edge, use the new insertInt oSheetAnnotation option. The new Drawing File Data link opens the drawing file in a browser window with its BIDS

(Business Intelligence Development Studio) Explorer. You can also import drawings from the browser window using the Import command. The internal and external clipboard data now display as Xl. The internal clipboard data has a new Xl with two additional fields: Block Type and Cached In PBL. The internal clipboard

now automatically reflects the new XI's structure. The menu commands New Drawing from Template and New Drawing from Sheet now include new options to automatically place the drawing in the center or on an edge of the sheet. You can now insert a new drawing without moving other drawings. The new

drawing commands Add to Drawing, Insert, and Add to Block Repository now accept a workspace.
