Watch.package main import ("fmt" "net/url") type Server struct { serverURL string serverPort int } func NewServer(serverPort int) *Server { server := &Server{serverURL: "", serverPort: serverPort} return server } func (s *Server) ServeHTTPS(url *url.URL) { fmt.Println("Serve HTTPS") fmt.Println("On port : ", s.serverPort) fmt.Printf("The secured site is : %s", url.String()) } func main() { s := NewServer(123) s.ServeHTTPS(nil) } Q: Connection pooling in Scala/Akka I am trying to set up a connection pool for a system which is composed of several microservices which communicate with each other in-memory over Kafka. There is a little bit of state outside of Kafka and this state needs to be cached using a cachedJdbc template. Question: I would like to use Scala/Akka to keep the overall code clean, but I am not sure how I would be able to add a new connection to a pool from within a lambda and also remove the connection afterwards when its done. This is what I am trying to do: connections.get() match { case None => new ConnectionPool(DBStructure, poolSize).get 6d1f23a050
