Smart Choice 3 Workbook Answer auto joeuhlig com.The present invention relates to an electromagnetic interference (EMI) shielded cable whose shield layer includes a conductive resin layer. The shield layer in a coaxial cable is also called the screen layer or the conductive shield layer. It is common practice to reduce EMI due to a differential mode by forming a conductive shield layer in a shield conductor of a coaxial cable and connecting the shield conductor to a chassis or a shield case in an electronic apparatus. Conventionally, as the material of the shield layer of a
