With the given parameters, this mixture can be regarded

as a Gaussian process. Given a collection of the three latent vectors, this is a three-dimensional Gaussian random vector. We have done the simulation in $[**R**]{} [@R]$, and the goal was to show the structure of the matrices. We fixed the μ and Σ , and we wanted to show that each latent vector has the distribution of the corresponding Gaussian process, and the correlation between them. It could be interpreted as the result of a simple latent factor analysis. We have also shown the matrices of the estimation of the Σ , which is supposed c6a93da74d
