

To do more, Microsoft has a stable which does not consume any memory at all. So I am sure that it is possible for one to create the application to do the calculations itself. The question is will it be less resource intensive? If you are going to support your partners, support all browsers. I know, there is a lot of legacy application deployed on IE 6 and 7... and you should support them too. We should not forget that IE 6/7 is now a key entry point to our IT world. Yet, I see that when IE8 or IE9 becomes stable, I don't see Microsoft supporting it, this is our guess or my work should I say, everybody's guess to see what Microsoft will do here and when? Really? I would think that you would want to keep a good reputation with your partners too. No matter who you are talking to, you need to be able to answer the question whether your product is stable. This is yet another example of Microsoft's disregard for their partners. One way to check this is to use the reg command shown below.vvvv@echo offif exist "C:\Users\U-0000000000\AppData\Local\Microsoft\Office KitsV2\v2.4.8.1209c\Microsoft.Office.Tools.Kit\v3.0.0.5\Release\OfficeLicenseCheckexit for /f" %%x in (License) do @if %%x><null>&exit /bAnother way is to use the license tool to check whether the appropriate key exists. If not, re-install. I do not know of a batch file shortcut to do this.rmvxlsreg query "hk\SOFTWARE\Wow6432Node\Microsoft\Office\15.0\Outlook\Office Licensing\CurrentVersion" /v "SOFTWARE\Wow6432Node\Microsoft\Office\15.0\Outlook\Office Licensing\CurrentVersion"exitvexitx

**Microsoft Toolkit V 2.4.9 Stable ( Office 2013,2007,2010) Activator- 40Mb**
