
Kerbal Space Program 1.8.1 (33459) DLC

A few years of battle, and the race was on. I needed to hop to the next moon, but I had no way to properly refuel. I'd had more than enough of an engineering headache for one day; I started a few trackers and left the cockpit. I just had to pray that the next satellite had fuel, and not just "a little." Kerbal Space Program 1.8.1 (33459) DLC Planet Mun was lucky. It had enough for three landers, including one to transport my Kerbal. That wasn't all, though.

There was also a reasonably sizable rocket launcher. It was perfect. I couldn't use the launcher; it had to be jury-rigged to hold my lander, but the rest of it? It fit inside a single window, and was ready to be used at my convenience. The next time I landed, my first full-sized construction was done. The launcher was a core part of the design, and I'd reused it on each subsequent attempt. First my second-to-last effort, then my last, and now I was going to finish what I had begun. It was a small step on the surface, but another in the engine. It was a micro-brake rocket. The liquid oxygen and kerosene had been preheated by the fuel squirters on my last tank. Now, the valves just needed to be activated. That part, I knew. The first part was getting my hands dirty. I opened a new window, and started a piloting program. Each engine is activated by a single button on the keyboard, and brings your throttle up to 10% speed. As the engine is activated, the throttle flashes. I took the throttle up to 10, then set it right at the backburner. There was nothing to lose by getting a little mad. If you don't get it right, you can just restart the process.

Kerbal Space Program 1.8.1 (33459) DLC

The accidental, but otherwise successful moon landing has set the rest of the series off to the races. You unlock more Kerbals, and three new types of spacecraft, to create evocative new scenes, and then you take them to

different places, and stage the kind of accidental moments that make for good story-telling. The series' modding community has been working overtime to make it their own. It's now considerably more dangerous for the Kerbals to enter the atmosphere,

making up for the lack of a soft landing.

The sky is dotted with blasts of fire and billowing clouds of smoke. It's a fitting addition that makes sure you always appreciate your engineering skills, whatever form they're hiding. With some of the best-

looking graphics out there, Kerbal manages to maintain the feel of a rough and tumble sim. The control system is back to basics again. You fly the ship with joysticks and the fire button, and that's it. I can't tell you what happened to the mouse button that

was part of the original, but I'd love to see it return. The game controls more like a space simulator again, rather than a physics sandbox, and it's refreshing. Kerbal's flying through space is varied and exciting as ever, with all manner of neat

situations. There's no lack of places to explore, whether it's the moon, or the KSP universe. Your Kerbal will end up moving in areas where there aren't any Kerbals, and that will be fun. The presentation is no less inventive. That memorable, unsettling intro has

been perfectly preserved. The new Kerbal's cockpit still looks kinda like a robot's head, but with 90s anime flair.

The soundtrack is excellent too.

Anthemic, heavy, and all too alien, it's the perfect accompaniment to your adventures.
