ivory ii-grand pianos feature the new ivory ii piano dsp engine, which offers a highly flexible polyphonic synthesizer with nearly unlimited new expressive and creative capabilities. the new ivory ii piano engine features a new harmonic resonance modeling (hrm) algorithm that delivers the best possible piano performance by reproducing the true harmonic structure of the strings at the same time. ivory ii-grand pianos can also be run as a standard polyphonic synthesizer, a new dynamics parameter set, a new dynamics control for the ivory ii piano engine, and a variety of new dynamics controls for sound design. ivory ii-grand pianos offer a wealth of new control and programming features to get the most out of your ivory ii-grand pianos. the ivory ii piano engine now includes the key-noise parameter, which is applied to the keys as well as the sustain pedal. this allows the piano to sound more natural when used as a solo instrument, and the sustain pedal to sound more natural when a sound is played in tandem with the ivory ii-grand piano. ivory ii-grand pianos have also been updated with a new, more user friendly workflow. the new workflow allows for quick and easy setup of the ivory ii-grand pianos, while the addition of the lid position parameter makes it possible to quickly switch between playing and recording. ivory ii-grand pianos are fully functional, midi and usb compatible, and feature all the same award-winning features that have made the ivory ii-grand piano one of the most popular and highest rated virtual instruments. ivory ii-grand pianos are not compatible with windows 7.

ivory ii takes its cue from its acclaimed predecessor in providing a flexible playing experience. you can control pitch bend and portamento via a dedicated portamento control, with three automated modes and two target ranges (0-100 and 0-127). you can also alter the timbre of ivory ii's samples using a dedicated eq section. however, this can be switched off if you want to use your own settings or tweak them further. ivory ii is a full dsp-based virtual instrument. its not as deep as you might think, though, as you dont need to go to the bottom of the program pages to find out how it all works. the process of playing back ivory ii is quite straightforward. you have a sequencer of sorts, with several channels to select a patch, key and portamento. once this is selected, the patches and channels are updated, and you can use the key and portamento controls to change the playback. you also have a standard reverb control. if you want to change the reverb settings, you can do this directly via the dsp (though there is no 'dry' reverb control, only a'reverb' control). ivory ii provides a hefty arsenal of piano samples, all of which are played back at the most realistic level you could wish for. the default sampling rate is 44100hz, but the instrument can be configured to use a variety of other sample rates. moreover, it offers two samplers. you can record your own midi notes, or you can use the sound engine's built-in sampling and conversion process. you can set these to 'default' or 'custom'. ivory ii also has a keyboard that gives full access to the piano sound engine. you can adjust the velocity curve for each key, and there are several velocity layers, preset mappings and a note following system to help you get the most out of the instrument. also included is an arpeggiator, which is a popular feature on many virtual pianos, with preset mappings and several modulation sources. it doesnt do much more than provide a repeating octave sequence, but it can be used in various ways. 5ec8ef588b
