In your home, one of the most important aspects is your safety. Even if you want a home security system that causes less disturbances, it still will do so. Regardless of what type of system you choose, you are going to have to have some type of lighting in your home. The difference between Christmas lights and regular fluorescents has many advantages. Some of these include a cost to use, an economic savings, a tax break, and convenience. At Christmas time, most people understand the tax saving associated with the lighting, but probably don't give much thought to the other benefits. While it is possible to have those extra safety features, it will affect the overall performance of the system and you will have to worry about more than you care to throughout the year. The lights come on and off as they are supposed to, while your home security system allows you to have complete control of such actions as adding more lights, turning off lights, checking on the up-and-coming company that is protecting you, or taking a shower. The main thing I want people to take away from the closing is I believe that this is the year where we'll start to really see the light bulb change in the technology industry. I think we're at the point where the traditional light bulb is becoming obsolete. Just as the cell phone, the television, the microwave and the computer changed our lives, I think the light bulb is going to be the next major change in the industry. As far as I understand, the main difference is that Final Cut Pro is for video production and it ships with pre-made templates for things like web, trailers, music videos and other types of content. But if you want to work with raw video footage, you can export the footage into the internal Adobe Premiere Pro (free) and begin editing it there. The whole video editor isn't limited to just one timeline, however. In fact, there's a workspace for other parts of your editing (multiple editing tracks, etc.). I work in Premiere pro as well as InDesign and some other Adobe products. Why is this useful? Well, you can access all your layers, objects, colors, etc. from almost ANY Adobe product.

What It Does: The Gradient tool is great for realistic gradients in illustrations. It is perfect for adding those 'lighting' effects kids spend so much time hand drawing on paper. In Photoshop, you can easily add various gradients to the layer – use a blur tool to soften the line or adjust the dynamics of a gradient to make the transition gradual. The new adjustment layers for Photoshop can be used to change selections with just a few clicks. Using a layer, adjust any part of the image like the exposure, color, or even content of the layer. The adjustment layer can be deleted or merged into the background. You can specify top-level site content of a page, such as a menu or photo slider, and provide content and design options for that area. This is nice because you don't have to assign content to each layer of a site. Think of it as individual options in an overall page design.
