This tool can be used to check and repair corruptions of .NET framework 3.5 or 4.0 installations. Includes the ability to recover objects and other resources from memory, and to recover from application, physical or virtual memory. It is possible to extract resource objects from memory and return them to a resource store on disk, or to log the recovered memory. By default, the tool will process the... I'm developing a .NET app that uses a number of NuGet packages, and I'm using .nuspec files to pull them in. I have created a .nuspec file for each package that has a dependency on another. I would like to make my existing .nuspec files be consumed by this new tool, so it would work in the same way it does now, meaning it could be included in any NuGet .nuspec file as a dependency. Provides a Type-safe enumerable adapter that allows iteration over an iterable, a type that implements IEnumerable, and a functional approach to query over the objects in the enumeration. Source: CodePlex.com It will look into the configuration registry, and analyze the registry key for the complete list of Microsoft SharePoint 2010 Databases, then it will remove the reference to the databases which are not active in the current site collection, and finally it will create a backup of the configuration registry key.
