Input Remapper lets you remap Windows and Mac key combinations. This program lets you assign new Windows commands to Mac keyboard shortcuts. You can remap up to 64 commands with the help of Mac key shortcuts or any of the following methods: • The software can detect the Mac keyboard under Windows XP or Vista, and configure some options, while others are already taken care of. • Default keyboard shortcuts include numerous functions, such as Delete (fn+Backspace), PrintScreen (fn+Eject), Brightness decrease and increase (fn+F1/F2), volume control and media buttons, as well as a replacement for the Ctrl+Alt+Delete Windows combination (fn+Ctrl+Alt+Backspace). • The software lets you control the keyboard backlit brightness. However, in order to also control the screen backlit, you need BootCamp drivers. • Input Remapper comes with an overly-simplified interface with only a window and two options: "Presets" and "Remappings". • New presets include the keyboard repeat delay and rate, as well as mouse sensitivity and acceleration settings. • Remapping allows you to assign or reassign new keyboard shortcuts. While the app already comes with an extensive list, you can still make new entries to suit your needs. • Input Remapper works with Mac OS X 10.4 or later. However, due to compatibility issues, this command was bound to fn+left click rather than a combination that included the Ctrl key. LONDON — London's Piccadilly Line has been taking British commuters into the city center at a faster clip for years now, while its original counterpart — the District Line — has been dubbed the slowest in the country. But over the past year, the Piccadilly Line has been far from the only London rail line to see a spike in speed. The Channel Tunnel's Eurostar service now carries passengers between England and France in under three hours, a feat that took nearly nine hours just a few years ago. Britain's privatized rail system has long had a reputation for the slowest trains in Europe, but more recently, the ability of private train operators to substantially increase speeds has had a growing impact on Britain's reputation. Although London's privatized rail system has long had a reputation for the slowest trains in Europe, most European countries have more private operators, and their privately owned trains generally have a faster schedule and more capacity than the government-run trains. If you use the Adobe suite, you'll probably find the KeyStep to be a really useful utility. If you have a Mac, you

know that just by hitting the fn key, you can switch between keyboard shortcuts for various commands, for example, the Brightness Control function keys, like fn+F1/F2. If you own a Macbook, perhaps you've found that it can sometimes be extremely annoying to have to hit the Fn key just to execute a function on your keyboard. In order to help you, there are a few programs you can try. I've used them in the past and found them to be effective, although with one of them, you need to be a little more careful. The first software is the Keyboard Remap Manager, which lets you remap keyboard shortcuts. Description: When you use an Apple keyboard, there are certain keys that are reserved for use with functions, including the Control and Option keys, and the F-keys. However, in order to execute some functions, the Fn key must also be pressed. Thus, to use the PrintScreen command, you first need to hit Fn+F7. With a Macbook, this is an inconvenience, since it's often the only way to execute these commands without first using the Fn key.

PC owners should note that Windows 10's minimum requirements (3.3GHz processor and 8GB RAM) will likely not be met by many current-generation PC hardware. If you are
