The reason for this is so that I can apply other manipulations to the list before and after substitution. In Emacs Lisp, using (sexp 'abc) I can see that the string that I construct is '(abc), but I do not seem to be able to add a'to the front or end. In (list 'abc) the string representation is '(abc) and there is no way for me to insert a'to the beginning or end of the string. Using (string-join (list 'abc) "") leads to '(abc) as the string. I want to obtain '(abc)abc', i.e. what string-join returns but that has one (or both)
