One of my personal goals is to provide stunning images without spending hours at the computer editing it. While this requires a lot of skill and time, I have always wanted to use slider in Photoshop to get a similar effect. I just now discovered this other methodology. As mentioned above, I took a bunch of images to evaluate how the update is doing overall. They are mostly taken from the scanner and sorted into several folders. I reviewed the newly added Flintstone mode enhancement. I took a picture to show how well the new blending tools work. (see the screenshot above) Adobe did well. This is, in my opinion, the best and most robust "safari" mode, at least on the professional software side. Additionally, the mode is extremely useful when retouching images of closely composed subjects, such as the ones used in this article. In this mode, one can do a certain amount of processing using a non-destructive approach directly on the RAW image. So, before the image goes into JPEG format or is saved to a local folder, a photo editor can always "undo" the changes he or she has made, yet the changes remain in the RAW file. In the new engine, one can also perform straighten photo effects. I did a quick test of it, and found the image better when it's straightened a bit. This is probably to be expected, since straightening straightens the lines. However, it may well be that I wasn't working in the right mode. There are a few layers in the engine, and there is certainly more extensive functionality that I wasn't aware of. There is some speculation that the new OSX Lion style or the new Windows 7 Aero style may be affecting the interface, but I believe that is little more than a hunch and theory. In the top right corner of the image, there is a small version number which reads 5.0.28.
